|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| Credit Name: CSE3010 - Computer Science 3                                                                                                                                                                                                                        |  |  |  |  |
| Assignment Name: School                                                                                                                                                                                                                                          |  |  |  |  |
| <b>The following questions can help you in thinking critically about your problem-solving processes:</b>                                                                                                                                                         |  |  |  |  |
| <b>Understanding the Problem</b>                                                                                                                                                                                                                                 |  |  |  |  |
| How did you approach understanding the challenge?                                                                                                                                                                                                                |  |  |  |  |
| I broke the challenge down into sections: Entering first and last name, choosing grade and school, and then making the logo correlate to the school chosen. This made it easier to follow.                                                                       |  |  |  |  |
| Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?                                                                                                                                                     |  |  |  |  |
| Initially no, I thought it was pretty straight foward and similar to the other code I did for skillbuilders.                                                                                                                                                     |  |  |  |  |
| <b>Planning the Solution</b>                                                                                                                                                                                                                                     |  |  |  |  |
| Did you create a plan or break the problem into smaller steps before coding?                                                                                                                                                                                     |  |  |  |  |
| Yes I did, I broke the problem into smaller steps, and worked through them one step at a time.                                                                                                                                                                   |  |  |  |  |
| How did you decide on the tools, data structures, or algorithms to use?                                                                                                                                                                                          |  |  |  |  |
| I mainly chose which tools to use by following the example structure on D2L, however, the it made sense to follow it that way because having a combo box for the grade and school kept the application organized, due to it being able to collapse it's options. |  |  |  |  |
| <b>Implementation</b>                                                                                                                                                                                                                                            |  |  |  |  |
| Did you write the code in small pieces or attempt the entire solution at once?                                                                                                                                                                                   |  |  |  |  |
| I wrote the code in small pieces following the broken up plan.                                                                                                                                                                                                   |  |  |  |  |
| How did you test your solution along the way to make sure it was working?                                                                                                                                                                                        |  |  |  |  |
| After each step of the plan, I tested the code to make sure it was doing what I wanted it to do. Only after confirming the code did what I needed, then I proceeded to the next step.                                                                            |  |  |  |  |
| <b>Overcoming Challenges</b>                                                                                                                                                                                                                                     |  |  |  |  |
| What part of the problem was the most difficult for you?                                                                                                                                                                                                         |  |  |  |  |
| The only part of the problem that didn't work out for me at first was making the text go to the next line rather than just all in one line, and then making the logo smaller                                                                                     |  |  |  |  |
| How did you handle moments when you felt stuck or unsure of what to do next?                                                                                                                                                                                     |  |  |  |  |
| I tried to test different methods that I thought would help, and when none worked, I asked for help.                                                                                                                                                             |  |  |  |  |
| <b>Learning</b>                                                                                                                                                                                                                                                  |  |  |  |  |
| Was there anything you learned that you think will help you with future challenges?                                                                                                                                                                              |  |  |  |  |
| I learned what a JTextArea did, and how to resize images to fit within the application.                                                                                                                                                                          |  |  |  |  |
