Complete questions #1 - 10

1. No, because storage in memory can only be accessed when the application is running, while a file is persistent(lasting) stored on a hard disk or CD.
2. Import java.io.*;
3. …
4. a) A try-catch-finally statement
   b) try
   ```
   {
        textFile.createdNewFile( );
        System.out.println("New filecreated.");
   }
   catch( IOException e )
   {
        System.out.println("File cannot be created.");
        System.err.println("IOException: " + e.getMessage());
   }
   ```
5. The err stream displays error messages. They are displayed on the screen.
6. File streams keep track of the file position (the point where reading of writing last occurred). The carriage return character (Cr) and line feed character (Lf) makes up a line terminator.
7. The FileWriter and BufferedWriter classes are used to write data to a file.
8. ```
   Try
   {
        In = new FileReader(dataFile);
        readFile = new BufferedReader(in);
        While ( accBal = readFile.readLine()) != null )
        {
             totBal += Double.parseDouble(accBal);
        }
   }
   ```
9. Object serialization is when objects are written to a file. Object deserialization is when an object is retrieved from a file.
10. A serializable interface must be implemented if objects of a class are to be written to a file.
   ```
