Credit Name: CSE2130 - File Structures & Exception Handling

Assignment Name: Semester Average GUI

Error Log Entry

What error message did you encounter (if any)?

What unexpected behavior did your program exhibit?

1. It would only display the most recent data rather than the whole list.

2.When program would run again past data would be displayed as well. (from the last application run)

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

1.Logic Error - it 1. The JTextArea would only display text one time unlike System.out.print and 2. it deleted the old data whenever new data was entered

2. Logic Error - To keep all the data in the file after each save I had to use new FileWrite(dataFile, true) , but this meant that the data would not be deleted when the program ran again from the start

Include a screenshot of specific lines of code.

1.
```
while((dis = readFile.readLine()) != null)
{
    display.setText(dis);
}
```

2.
```
try
{
    out = new FileWriter(dataFile, true);
    writeFile = new BufferedWriter(out);
```

How did you fix the issue?

1. I made it save the line into a seperate string, so that all the data would display at once

2. I had to add a new FileWriter at the beginning of the code that was false to erase the old data.

Provide the corrected code or solution using a screenshot.

1.
```
while((read = readFile.readLine()) != null)
{
    dis += read + "\n";
}

display.setText(dis);
```

2.
```
public stuSemAvgGUI() {
    initialize();

    try {
        FileWriter out = new FileWriter(dataFile, false);
    }
    catch (IOException e)
    {
        e.getMessage();
    }
}
```
