Credit Name: CSE2130 - File Structures & Exception Handling

Assignment Name: Vowels

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

I looked at the templete to help me know the pieces of code I have to complete.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

This code seemed much easier and more straightforward than the last one with much less technical pieces, other that determining the amount of vowels.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

Because the code was short enough and simple, breaking the code into smaller steps was not neccessary.

How did you decide on the tools, data structures, or algorithms to use?

I followed the templete. I used a while loop to read the file because the amount of lines were unknown, but then used a for loop to iterate through the letters having it run until all letters are compared.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I wrote basically the entire solution at once.

How did you test your solution along the way to make sure it was working?

Once I wrote the code, I went to test it and fixed the problems that occured.

Overcoming Challenges

What part of the problem was the most difficult for you?

Figuring our how to check if each character is a vowel.

How did you handle moments when you felt stuck or unsure of what to do next?

I looked at my past codes from skillbuilders/mastery and looked at what structures they used to help me determine how to do my task.

Learning

Was there anything you learned that you think will help you with future challenges?

I refreshed on how to compare letters to each other.
