Credit Name: CSE2130 - File Structures & Exception Handling

Assignment Name: Semester Average GUI

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

I started by creating the GUI so that I could see all the parts I had to work with, and then further went back and forth on the example to try to create the same outcome.

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

Everything felt okay other than the popup as I had not seen it before. I asked for help and used ChatGPT to help fix the issue.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

I broke the problem into smaller steps: 1. First I created the GUI 2. Then I worked on the button that made everything save to the files. 3.Once that worked, I moved on to coding displaying the file. 4. Then I figured out how to do the pop up to show whether it sucessful saved or displayed the file.

How did you decide on the tools, data structures, or algorithms to use?

I decided by referencing my other codes to see what the best course of action was to fulfil my task. For example, to get the average of the grade, I referenced the Semester Avg skillbuilder in Chapter 10, and so on.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

I wrote the code in smaller pieces as I listed above.

How did you test your solution along the way to make sure it was working?

To make sure the save button worked I would simply go to the file to ensure the data was there and then displayed it using system.out.print rather than to the GUI to ensure the info was correct. Then I would move on to making it display on the GUI.

Overcoming Challenges

What part of the problem was the most difficult for you?

The popup, because everything else I was familiar with and have done before.

How did you handle moments when you felt stuck or unsure of what to do next?

I mostly referenced my other code or ask for help on stuff I was entirely stuck on.

Learning

Was there anything you learned that you think will help you with future challenges?

I learned how to make it display a popup message.
